Advanced R Programming - Lecture 1

Krzysztof Bartoszek
(slides by Leif Jonsson and Måns Magnusson)

Linköping University

krzysztof.bartoszek@liu.se

29 VIII 2023 (A36)

Today

K. Bartoszek (STIMA LiU)   Lecture 1

About the course
Presentation(s)
Course Practicals
Why R?
Basic R

Aim of the course

Learn to

- Write R programs and packages
- Write performant code
- Learn basic software engineering practices

K. Bartoszek (STIMA LiU)   Lecture 1

Aim of the course

6/ 48

Course Plan

Part 1: R Syntax

Period: Week 1–2
Students work: Individually
Lab: Documented R file
Computer lab

Topics

- Basic R Syntax
- Basic data structures
- Program control
- R packages

About the course
Presentation(s)
Course Practicals
Why R?
Basic R

Aim of the course

Part 2: Advanced topics

Period: Weeks 3–7
Students work: In groups
Turn in: R package on GitHub
Seminar (**OBLIGATORY**),
1 Lab to help GitHub+Travis/GitHub Actions,

Topics

- Performant code: Writing quality code
- Linear algebra, Object orientation, Graphics
- Advanced I/O
- Performant code: Writing fast code
- Computational complexity
  (with exercise session, **BONUS** point possibility)

Evaluation of 2021 course

1. 46 students took the course in 2021.

2. 21 submitted an evaluation.

3. Course grade: 3.5 ± 1.2.

4. Changes for 2023 based on the evaluation and exam.
   - Updating of lecture and lab material.
   - Updated bonus lab.
   - Increased bonus points.

Course Practicals...

Course Practicals...

- Course code: 732A94
- https://www.ida.liu.se/~732A94/index.en.shtml messages, **exam information** (materials incl. 2016, course reading)
- https://github.com/STIMALiU/AdvRCourse
- LISAM submission, materials
- https://www.rstudio.com/
- https://cran.r-project.org/
- https://git-scm.com/

Course literature...

Course literature...

- Matloff, N. The art of R programming [online]
- Wickham, H. Advanced R [online]
- Wickham, H. R packages [online]
- Gillespie, C. and Lovelace, Efficient R programming [online]
- Google search, fora, . . .
- ...and articles.

Examination

Weekly mandatory labs/projects,
deadline: After corresponding lecture and seminar (for labs 3–6)
stated on lab/LISAM
Obligatory presentation and seminar attendance

Computer exam points
A:$[18, 20]$, B:$[16, 18)$, C:$[14, 16)$, D:$[12, 14)$, E:$[10, 12)$, F:$[0, 10)$

Bonus points

Bonus points

Computational complexity session bonus points can be obtained by correctly solving the exercises. Solutions to the exercises should be brought to the session. Then, students (from those that brought their solutions) will be selected at random for each exercise to present their solutions. Failure to present a correct solution will result in reduced bonus points from this session. In particular this implies that the student who wants the bonus point has to be present at the session.

Bonus points are also for correctly solving the bonus lab session "Machine Learning"

Why R?

The One main reason

Choose the right tool for the job!

The One main reason

Choose the right tool for the job!

Your main job will be statistics and data analysis...
R is (nearly always) the right tool for that job!

Pros

- Popular (among statisticians)
- Good graphics support
- Open source - all major platforms!
- High-level language - focus on data analysis
- Strong community - vast amount of packages
- Powerful for communicating results
- API's to high-performance languages as C/C++ and Java

Cons

- "Ad hoc", complex, language (Compare Perl, Awk, Sh...)
- Can be slooooow
- Can be memory inefficient
- (Still) Hard'ish to troubleshoot (but ...)
- (Still) Inferior IDE support compared to state of the art (but ...)

Pros/Cons

- Niche language
- Specialized syntax
- Very permissive (changing for packages on CRAN)
- Troubleshooting: no (?) need to investigate memory
- (Still) Inferior IDE support compared to state of the art

Comparing is tricky

```
options ( digits =22);x<-sqrt(2)
 x*x
[1]  2.0000000000000000444089
(x*x)==2
[1]  FALSE
isTRUE( all . equal ( x*x , 2 ) )
[1]  TRUE
i d e n t i c a l ( x*x , 2 )
[1]  FALSE
i d e n t i c a l ( 2L , 2 )
[1]  FALSE
i d e n t i c a l ( 2L , 2L )
[1]  TRUE
```

About the course

Data structures
Logic and sets
Subsetting/filtering
Functions

Vectors: Use []

- index by:
    - positive integers: include element(s)
    - negative integers: exclude element(s)
    - logical: include TRUEs

```
vect <- c(6,7,8,9)
> vect[vect >7]; vect[which(vect >7)] ## difference?
[1] 8 9
[1] 8 9
> vect[1:2]
[1] 6 7
> vect[c(1,2)]
[1] 6 7
> vect[c(-1,-2)]
[1] 8 9
```

About the course

Why R?
Basic R

Data structures
Logic and sets
Subsetting/filtering
Functions

Matrices

- Use [,]
- Two dimensions
- Index as vectors
- Can reduce (drop class) to vector
- Use [,,drop=FALSE]

Data structures
Logic and sets
Subsetting/filtering
Functions

Matrices

```
> mat <- matrix ( c (1 ,2 ,3 ,4 ,5 ,6) , nrow =2)
> mat
      [ ,1] [ ,2] [ ,3]
[1 ,]    1    3    5
[2 ,]    2    4    6
> mat [ c (1 ,2) , c (1 ,2) ]
      [ ,1] [ ,2]
[1 ,]    1    3
[2 ,]    2    4
> mat [ c (1 ,2) ,]
      [ ,1] [ ,2] [ ,3]
[1 ,]    1    3    5
[2 ,]    2    4    6
> mat [ mat >4]
[1] 5 6
```

Basic R

Data structures
Logic and sets
Subsetting/filtering
Functions

Lists

- Use [] to access list elements
- Use [[]] to access list content
- Index as vectors
- Use $ to access list element by name
- Not like typical lists in other programming languages
- What if name of element sits inside a variable?

About the course

Basic R

Data structures
Logic and sets
Subsetting/filtering
Functions

Lists

```
> lst <- list(a=47,b=11)
> lst[1]
$a
[1] 47

> lst[[1]]
[1] 47
> lst$b
[1] 11

> x<-"a";lst[which(names(lst)==x)]
$a
[1] 47
> lst[[which(names(lst)==x)]];lst[[x]]
[1] 47
[1] 47
```

About the course

Course Practicals
Why R?
Basic R

Data structures
Logic and sets
Subsetting/filtering
Functions

Data frames

- Very powerful data structure
- Can roughly think about it as the R representation of a CSV file
- Can be loaded from a CSV file
- Can be accessed both as a matrix and a list

- Be careful: picky data structure

Data structures
Logic and sets
Subsetting/filtering
Functions

Assigning subsets

```
> mat
       [,1] [,2] [,3]
[1,]     1    3    5
[2,]     2    4    6
> mat[mat>4] <- 75
> mat
       [,1] [,2] [,3]
[1,]     1    3   75
[2,]     2    4   75
```

About the course
Presentation(s)
Course Practicals
Why R?
Basic R

Data structures
Logic and sets
Subsetting/filtering
Functions

Functions

```
my_function_name <- function(x, y){
        z <- x^2 + y^2
        return(z)
}
```

Unlike in many languages, return in R is a **function**. In other
languages, return is usually a **reserved word** (like if). This
means you must use return as a function call with parenthesis.
By default R returns the last computed value of the function, so
return is not strictly necessary in simple cases. What if you have a
bunch of nested ifs?

markmyassignment (Labs 1 and 2)

R package for automatic marking of R assignments for students
and teachers based on testthat test suites
Authors: Måns Magnusson, Oscar Pettersson
github.com/MansMeg/markmyassignment
cran.r-project.org/web/packages/markmyassignment/
Introduction: cran.r-project.org/web/packages/
markmyassignment/vignettes/markmyassignment.html

Test–driven development (TDD): software requirement are made
into test cases, before software is finished. As the software
development, all software is tested against all the test cases.
